Week 3

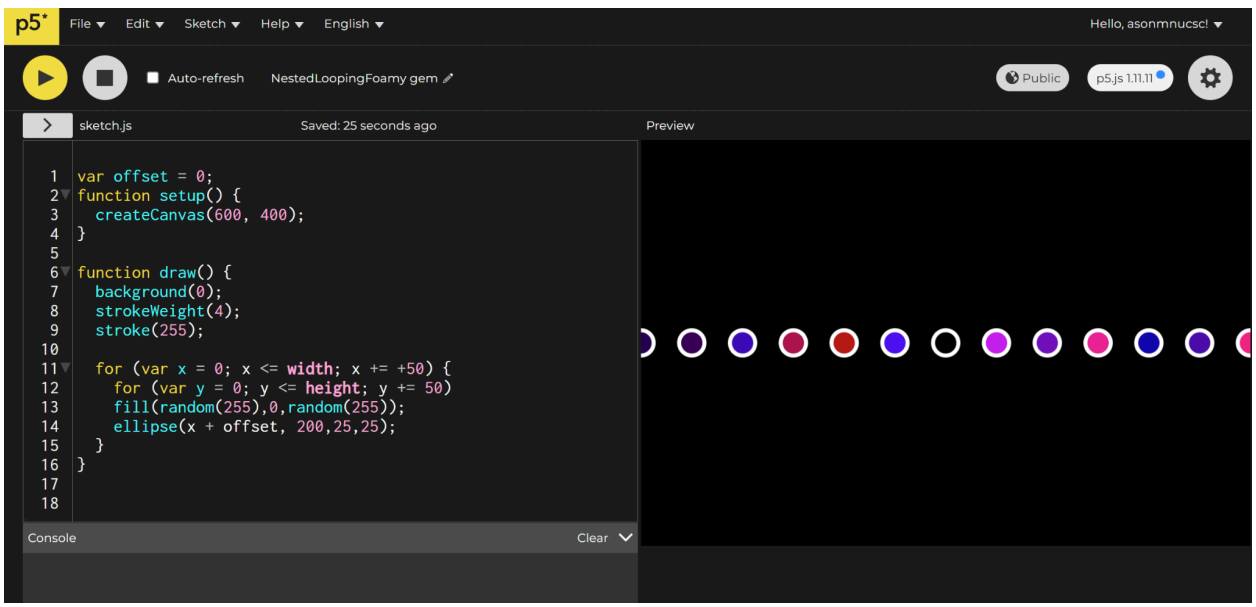
Read:

"Iteration" in Coding as Creative Medium (pg 153-154)
Interesting textures

Watched:

Video Tutorials (via The Coding Train): Nesting loops

- Created animation with nested code loops
- Had some trouble getting all the dots at first there were only a few for some reason.



Video Tutorials (via The Coding Train): functions

- Made the variables into an object to add aspects to the object (speed direction ect.
- Finally got the ball to move
- 0 background is black
- Define func, name ( ) → add arguments and parameters —>code
- Define -> tell program when func sho
- MODULAR PROGRAM: move part bounce part display part. Very nice to control every piece separately.
- I played around with renaming the variables/functions to remind myself of the difference between them and ran into a wall because I was calling them by the wrong name at first but finally got the animation to work and the pink ball is so cute. https://editor.p5js.org/asonmnucsc/full/vr7zkk5eT

- Video Tutorials (via The Coding Train): Conditional Statements
- Boolean = T/F 1 OR 0
- IF (some Boolean expression) {then do this thing aka execute this code }
- then do the thing
- https://editor.p5js.org/asonmnucsc/full/24sryF8sV
